Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A quantum dot light-emitting diode comprising:

a top electrode;

a bottom electrode disposed substantially opposite the top electrode and on a substrate

including a polyethyleneterephthalate or a polycarbonate substrate;

an inorganic quantum dot light-emitting layer provided between the top electrode and the

bottom electrode;

an inorganic electron transport layer disposed between the inorganic quantum dot light-

emitting layer and the top electrode; and

an organic hole transport layer disposed between the inorganic quantum dot light-

emitting layer and the bottom electrode,

wherein the organic hole transport layer is made of a material selected from the group

consisting of poly(3,4-ethylenedioxythiophene) (PEDOT)/polystyrene para-sulfonate (PSS)

derivatives, poly-N-vinylcarbazole derivatives, polyphenylenevinylene derivatives,

polyparaphenylene derivatives, polymethacrylate derivatives, poly(9,9-octylfluorene)

derivatives, poly(spiro-fluorene) derivatives, N,N'-diphenyl-N,N'-bis(3-methylphenyl)-(1,1'-

biphenyl)-4,4'-diamine (TPD), N,N'-di(naphthalene-1-yl)-N,N'diphenyl-benzidine (NPB), tris(3-

methylphenylphenylamino)-triphenylamine (m-MTDATA), and poly(9,9'-dioctylfluorene-co-N-

(4-butylphenyl)diphenylamine (TFB).

2. (Previously Presented) The quantum dot light-emitting diode according to claim 1,

wherein the quantum dot light-emitting diode further comprises:

a substrate disposed beneath the bottom electrode,

wherein the organic hole transport layer is disposed on the bottom electrode, and

wherein the bottom electrode is an anode and the top electrode is a cathode, and

PHO-0024 SU-281 RF200508-014-1-US0 Application No. 10/580,394

Response dated: December 21, 2010

In Reply to the Office action dated: July 21, 2010

wherein the anode, the organic hole transport layer, the inorganic quantum dot lightemitting layer, the inorganic electron transport layer and the cathode are formed in this order on the substrate.

- 3. (Previously Presented) The quantum dot light-emitting diode according to claim 1, wherein the inorganic electron transport layer is made of an oxide selected from the group consisting of TiO2, ZnO, SiO2, SnO2, WO3, Ta2O3, BaTiO3, BaZrO3, ZrO2, HfO2, Al2O3, Y2O3 and ZrSiO₄; the nitride Si₃N₄; or a semiconductor compound selected from the group consisting of CdS, ZnSe and ZnS.
- 4. (Previously Presented) The quantum dot light-emitting diode according to claim 1, wherein the inorganic quantum dot light-emitting layer is made of a material selected from the group consisting of: Group II-VI compound semiconductor nanocrystals, including CdS, CdSe, CdTe, ZnS, ZnSe, ZnTe, HgS, HgSe and HgTe; Group III-V compound semiconductor nanocrystals, including GaN, GaP, GaAs, InP and InAs; PbS; PbSe; PbTe; CdSe/ZnS; CdS/ZnSe; and InP/ZnS.
- 5. (Previously Presented) The quantum dot light-emitting diode according to claim 1, wherein the inorganic electron transport layer is formed by a solution coating process selected from the group consisting of sol-gel coating, spin coating, printing, casting and spraying, or a vapor coating process selected from the group consisting of chemical vapor deposition (CVD), sputtering, e-beam evaporation and vacuum deposition.

6. (Cancelled)

7. (Previously Presented) The quantum dot light-emitting diode according to claim 2, wherein the inorganic electron transport layer is made of an oxide selected from the group consisting of TiO₂, ZnO, SiO₂, SnO₂, WO₃, Ta₂O₃, BaTiO₃, BaZrO₃, ZrO₂, HfO₂, Al₂O₃, Y₂O₃ and ZrSiO₄; the nitride Si₃N₄; or a semiconductor compound selected from the group consisting of CdS, ZnSe and ZnS.

Application No. 10/580,394

Response dated: December 21, 2010

In Reply to the Office action dated: July 21, 2010

8. (Previously Presented) The quantum dot light-emitting diode according to claim 2, wherein the inorganic quantum dot light-emitting layer is made of a material selected from the group consisting of: Group II-VI compound semiconductor nanocrystals, including CdS, CdSe, CdTe, ZnS, ZnSe, ZnTe, HgS, HgSe and HgTe; Group III-V compound semiconductor nanocrystals, including GaN, GaP, GaAs, InP and InAs; PbS; PbSe; PbTe; CdSe/ZnS; CdS/ZnSe; and InP/ZnS.

9. (Previously Presented) The quantum dot light-emitting diode according to claim 2, wherein the inorganic electron transport layer is formed by a solution coating process selected from the group consisting of sol-gel coating, spin coating, printing, casting and spraying, or a vapor coating process selected from the group consisting of chemical vapor deposition (CVD), sputtering, e-beam evaporation and vacuum deposition.

10. (Currently Amended) A quantum dot light-emitting diode comprising:

a top electrode;

a bottom electrode disposed substantially opposite the top electrode and on a substrate including a polyethyleneterephthalate or a polycarbonate substrate;

an inorganic quantum dot light-emitting layer provided between the top electrode and the bottom electrode; and

an inorganic electron transport layer disposed between the inorganic quantum dot lightemitting layer and the top electrode,

wherein the inorganic electron transport layer includes an oxide selected from the group consisting of TiO₂, ZnO, SiO₂, SnO₂, WO₃, Ta₂O₃, BaTiO₃, BaZrO₃, ZrO₂, HfO₂, Al₂O₃, Y₂O₃ and ZrSiO₄; the nitride Si₃N₄; or a semiconductor compound selected from the group consisting of CdS, ZnSe and ZnS.
